1 INTRODUCTION

A frontpage can be made in word using the templates on the UT website [1]. This frontpage can then be saved as pdf and merged (via for example Adobe Acrobat Reader) with the pdf of this Latex file.

1.1 Good to know before you start

- This project is made with the "XeLaTeX" to import the fonts used by the UT housestyle. Make sure you also use this compiler (check in Menu > Compiler).
- The "XeLaTeX" compiler makes it impossible to import a PDF to your project. Combining with other PDFs should be done in another programme, for example Adobe Acrobat Reader.

1.2 Some guidelines

1.2.1 What you shouldn't adapt

- Do not adapt anything in preamble.tex.
- Do not delete the files "arialnarrow.ttf" and "arialnarrowbd.ttf".

1.2.2 What you may adapt/add

- You can add as much tex files you like. You should add them in main.tex in the same way as it is done for the introduction file.
- Instead of the references.bib that already is added to this latex project, you can also import your citation files via Mendeley via the "Upload" button. You should delete first the current references.bib file.

A FIRST APPENDIX

This is the first appendix. You can add more appendices yourself.
